VSL 360 Tour Operations Management System

System Requirement & Process Flow Document

Objective

Develop a **web-based internal management system** for VSL 360 to handle the full tour process from **client inquiry to invoice, transport coordination, hotel reservation, and itinerary generation**.

The main goal is to reduce manual work, organize client information clearly, and allow the **sales, reservation, transport, and operations teams** to work from one system.

1. Main Workflow

Step 1 – Inquiry Received

The client inquiry comes mainly through **WhatsApp**.

At this stage, the **sales person** communicates with the client and collects all required trip details.

Step 2 – Client Profile Creation

The sales person creates a **new client profile** in the system.

This profile should include:

- Main client details
- Tour details
- Travel dates
- Vehicle requirements
- Room and meal preferences

- Advance payment and costing details
- Passport and flight ticket attachments
- Additional activity requests
- Special celebrations or notes

Step 3 – Add Pax / Additional Guests

Inside the main client profile, the sales person should be able to add:

- Main guest
- Spouse
- Children
- Other family members / friends

Example:

One booking may have 1 main client and 5 additional family members.

The system should allow adding multiple passengers under one trip.

Step 4 – Costing & Payment Entry

The sales person enters:

- Cost per person
- Total amount
- Advance paid amount
- Balance payment
- Invoice notes

After this, the system should automatically generate the **invoice**.

Step 5 – Internal Handover

Once the sales person finalizes the booking, the booking should be passed to:

- **Reservation Department**

- **Transport Department**

These departments will log into the system and update their own sections.

Step 6 – Department Task Completion

Reservation Department

Handles:

- Hotel bookings
- Room categories
- Meal plans
- Reservation notes
- Confirmation status

Transport Department

Handles:

- Vehicle assignment
- Driver assignment
- Driver language preference
- Baby seat or special vehicle notes
- Arrival/departure pickup details
- Internal transport notes

Step 7 – Automatic Document Generation

After the departments complete the required details, the system should generate 4 documents:

1. **Invoice**
2. **Transport Details Document**

   For internal use / driver arrangements

3. **Hotel Reservation Document**

   To send to the client or use internally

4. **Full Itinerary Document**

   To send to the client

2. User Roles

1. Sales Person

Access to:

- Create client profile
- Add trip details
- Add pax details
- Add costing
- Add advance payment details
- Upload attachments
- Generate invoice
- Submit booking to operations

2. Reservation Department

Access to:

- View confirmed bookings
- Add hotel details
- Add room categories
- Update reservation status
- Add booking confirmations
- Generate reservation document

3. Transport Department

Access to:

- View confirmed bookings
- Assign vehicle
- Assign driver
- Add transport notes
- Add pickup/drop details
- Generate transport document

4. Operations Manager

Access to:

- View all bookings
- Edit any stage
- Monitor department progress
- Approve final documents
- Manage users
- View reports and booking status

3. Required Data Fields

A. Tour / Booking Information

- Number of Days
- Tour Month
- Arrival Date
- Arrival Time
- Departure Date

- Departure Time
- Additional activities planned
- Special celebrations
- General special notes

B. Transport Information

- Vehicle model
- Special note about vehicle
- Baby seat needed or not
- Driver language preference
- Pickup details
- Drop-off details

C. Main Guest Information

- Guest name
- Citizenship
- Email
- Contact number
- Passport copy attachment
- Flight ticket copy attachment

D. Pax Information

- Number of adults
- Number of kids / infants
- Ability to add each passenger name separately
- Relationship if needed
- Age of children / infants

E. Hotel & Room Information

- Number of rooms
- Room preference
- Meal plan
- Meal preference
- Mobility limitations
- Hotel names by night
- Room category for each hotel

F. Costing & Payment

- Cost per person
- Total amount
- Paid advance amount
- Balance payment
- Payment notes
- Invoice number
- Invoice date

4. Client Profile Structure

Each booking should have one **Master Client Profile**.

Inside that profile:

- Main booking ID
- Main client details
- Pax list
- Travel details
- Hotel plan

- Transport plan
- Invoice details
- Attachments
- Generated documents
- Status history

Example structure:

Booking ID: VSL-2026-001

Main Guest: Mr. X

Tour: 09 Days Tour

Travel Dates: 11 April 2026 – 19 April 2026

Pax: 5 people

Sales Owner: Name of sales person

Status: Sales Confirmed / Reservation Pending / Transport Pending / Completed

5. Documents to be Generated

1. Invoice

Should include:

- Invoice number
- Client name
- Tour dates
- Pax count
- Cost per person
- Total amount
- Advance paid
- Balance amount

- Payment instructions

2. Transport Details Document

For internal coordination:

- Booking ID
- Client name
- Arrival / departure details
- Vehicle model
- Driver language requirement
- Baby seat requirement
- Special transport notes
- Day-by-day transport plan if needed

3. Hotel Reservation Document

Should include:

- Client name
- Travel dates
- Number of rooms
- Room type
- Meal plan
- Guest count
- Hotel list night by night
- Hotel room category
- Food preference
- Mobility notes
- Special celebrations

4. Full Itinerary Document

For sending to the client:

- Client name
- Tour dates
- Day-by-day plan
- Hotel names
- Room category
- Meal plan
- Activities
- Pickup details
- Important notes
